

shoelaces for trekking shoes

Our shoelaces for trekking shoes are made of polyester, where a polyamide filling is used for better strength. The laces are modified to be water resistant, according to the requirements of the GORE Company. They are characterized by denser knitting than traditional shoelaces, which makes them suitable for long hikes. They are available in different lengths and colours, thanks to which they adapt to different types of shoes. It is also possible to make flat or oval laces for trekking shoes according to the requirements of the shoe manufacturer.
